## AVAILABILITY SERVICES CLOUD SOLUTIONS

Infrastructure as a  
Service (IaaS)

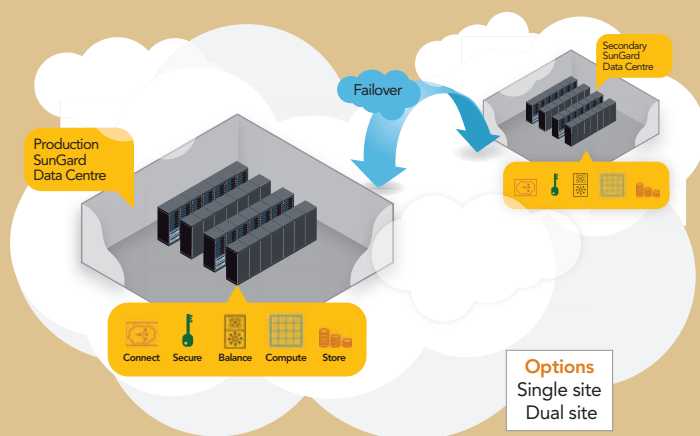

*SunGard's IaaS gives customers the flexibility to subscribe to the compute power and storage they require with the knowledge that the service can grow in tandem with their needs.*

### SunGard's cloud-based IaaS

Putting your IT assets into the cloud transforms traditional server infrastructure into a dynamic environment that enables better utilisation of hardware and more flexible management of demand for computing power. **Cloud computing from SunGard Availability Services gives your workforce access to the infrastructure, applications and data they need to fulfil your corporate strategy, and satisfy financial, operational and IT priorities.**

SunGard's fully managed cloud offering is a **private cloud service** delivered on shared infrastructure across multiple UK data centres. The service delivers computing power and tiered storage, which allows for flexible performance and availability, yet still achieves the physical and virtual security standards required by today's enterprise.

### IaaS Across Multiple Data Centres

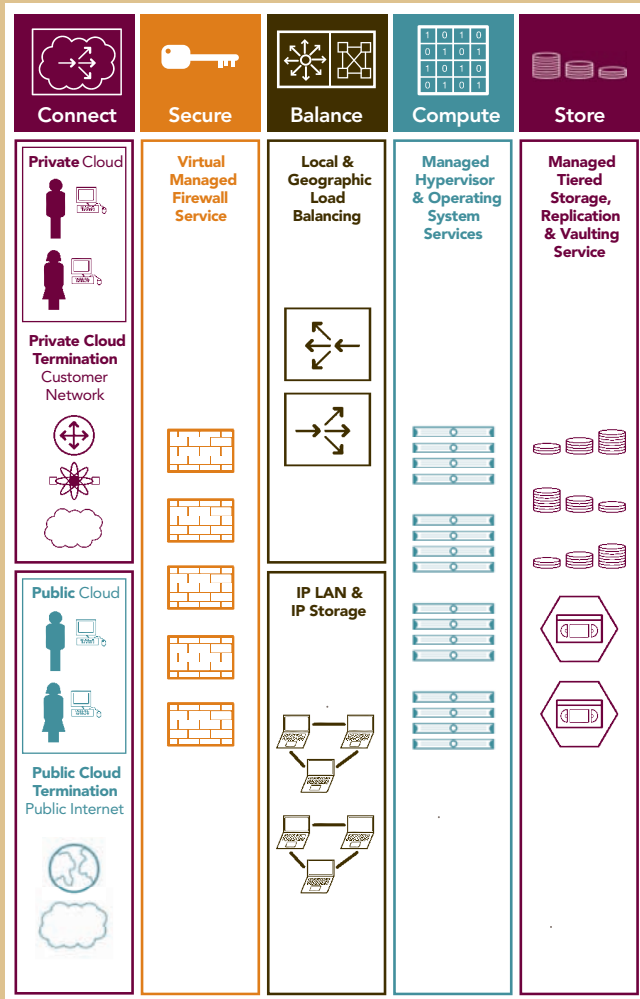

DATA CENTRES EUROPE AWARDS  
Finalist 2010 – Best New European Cloud Services

# CLOUD SOLUTIONS

## Infrastructure as a Service (IaaS)

### IAAS – SUNGARD AVAILABILITY SERVICES

The complete solution and each individual module is provided with its own SLA (Service Level Agreement), Terms and Conditions and Schedule of Services.

The solution's computing power, data storage and the associated security and connectivity delivers all this without the need for the customer to buy any hardware. This means **almost zero capital expenditure** for the customer, plus they have an IT resource that provides the following;

- **Always available** – As you'd expect from SunGard Availability Services, the solution has been designed to the highest specifications for resiliency to minimise downtime and is therefore delivered via two separate UK data centres.
- **Efficient** – The underlying technology focuses on maximising the utilisation of computing power and disk storage resulting in less wasted resource.
- **Modular growth** – Customers need only to buy what they require today rather than buying an IT solution that they will have to grow into over time. Extra resource can be provisioned in a timely manner as and when the customer needs it. **SunGard's five modules of IaaS each provide a flexible layer for each discipline and technology asset.** This provides effective operational delivery on a 24/7 basis that is secure, monitored and managed in a highly available yet cost-effective commercial model.

SunGard's IaaS solution delivers increased cost efficiency, improved flexibility and enhanced resiliency. It is provided from within the UK through SunGard's own highly resilient data centres, meaning the solution achieves European Union (EU) data protection compliance goals by keeping your data within EU territory.

Availability services may be new to many but not to SunGard – we've established our capability over five decades (long before the phrase 'cloud computing' was even coined), with 10,000 organisations worldwide putting our expertise to the test every day of the week.

That's what we call  
SunGard as a Service.
